MODEL 4010L DESIGN

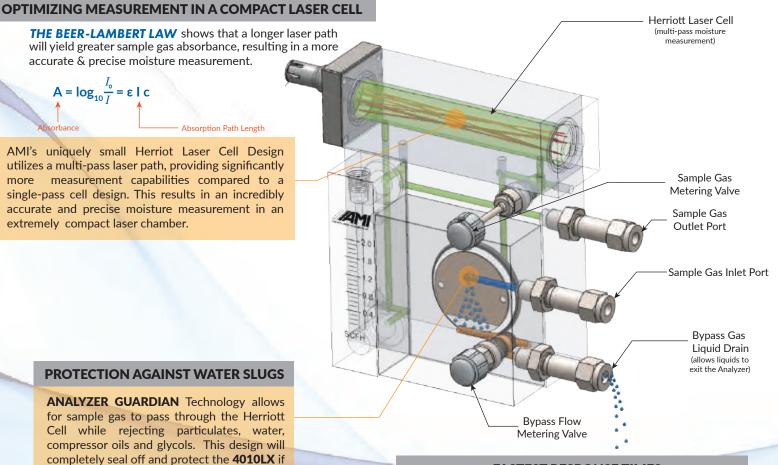

The **BARRACUDA MODEL 4010LX** TDL Moisture Analyzer has significantly raised the bar for measuring water vapor in a natural gas stream.

(connected to the COMMAND CENTER Software)

The ELIMINATOR HERRIOTT CELL BLOCK with ANALYZER GUARDIAN PATENTED

integrates a low volume sample gas measurement laser cell, flow meter, metering valves and Analyzer Guardian liquid rejection technology into a compact-stacked block. Our innovative design keeps the total analyzer size small, eliminates the use of leak-prone fittings and tubing and makes the MODEL 4010LX's gas path short to provide fast and accurate moisture readings.

FASTEST RESPONSE TIMES

The entire gas path is contained within our patented ELIMINATOR **CELL BLOCK**. The gas travels a short 4 inches from the Sample Gas Inlet before entering the laser measurement cell, resulting in a fast, accurate and stable reading.

FIELD SERVICABLE DESIGN

a large liquid slug reaches the analyzer.

The 4010LX design allows for the user to clean the reflective mirrors of the Herriott Cell in the field in the unlikely event liquids or particulates break through our protective membrane. Additionally, users can easily re-align the laser absorption peaks using AMI's **COMMAND CENTER** software.
